

ALL-NATURAL DEER AND RABBIT REPELLENT PROGRAM

The combination of all-natural products used strategically for our deer and rabbit repellent program discourage them from browsing trees, shrubs, flowers, and garden plants. Unlike many other repellent programs that work as taste deterrents requiring the deer to browse to be effective, our products work on scent, so the animals do not have to take a bite to be repelled. Most importantly, the products' ingredients are 100% all-natural and bio-degradable, making them safe around your kids, pets, and plants.

SPRING/SUMMER

Deer favored plants at this time of season include...

- Hosta
- Tulip
- Lily
- Daisy

FALL/WINTER

Deer favored plants at this time of season include...

- Arborvitae
- Rhododendron
- Yew
- Holly

OUR RECOMMENDED PROGRAM

The type of plants and browsing patterns on your property determine the time of year treatments are necessary to protect your landscaping. Treatments are performed once every three weeks targeting plants that are preferred by deer and rabbits. Over time, they learn there is no longer viable food sources on your property thus altering their daily browsing routes.

OUR APPLICATION METHODS

Each product requires a unique application method, and we base each individual service on the time of season and how long we have been treating the property. By using a combination of different all-natural products, we prevent the deer and rabbits from becoming comfortable with the scents on the treated property.

YOUR INVESTMENT

Our team provides a free property analysis to determine existing deer damage and potential problem areas. The price per application reflects an average price based on the full value of the proposed program. That way, we have the ability to adjust products and monitor plant health throughout the changes in season.

Keep your landscape lush and protected from browsing deer and rabbits. You've spent time and money nurturing your property. With a routine deer repellent program applied by the Pure Solutions team, you will protect your landscaping investment and keep your back yard free of synthetic chemicals. Deterring deer and rabbits from browsing on your landscape can overtime change their daily migration habits and reduce the expansion of deer tick activity on your property.
