

NATIONAL ORGANIC PROGRAM COMPLIANT **TICK & MOSQUITO CONTROL**

PROGAEA™ Tick and Mosquito is an exclusive Pure Solutions product that eliminates ticks and mosquitoes on contact while providing residual control. The essential oils that comprise the active ingredients work by disrupting the neurotransmitter function in target insects. It is both EPA FIFRA 25(b) exempt and National Organic Program (NOP) compliant, which benefit both the community and the environment. Our application method is careful and strategic in order to gain control over the target insects.

TICK SEASON

Active in the early spring through the late fall as long as temperatures are above freezing. Early spring and late fall treatments are key.

MOSQUITO SEASON

Active when temperatures are above 50 degrees on average. Early fall is when mosquito-borne diseases are most often transmitted.

OUR RECOMMENDED PROGRAM

To achieve the best results on most properties, we recommend a 21-day routine program scheduled for the active season. The active season length is weather dependent and can vary from year to year. In New England, ticks are typically active from March through November. Mosquitoes have a shorter season from April through October. It is never too late to start controlling these vectors, and you can customize the start and end of your program based on your needs.

OUR APPLICATION METHODS

We use backpack sprayers to apply PROGAEA™ Tick and Mosquito on all open areas of the lawn and along the perimeter of the property. Our application methods change slightly throughout the season based on the behavior of the pests. To target ticks, we focus our spray close to the ground, along the perimeter of the property and around stone walls and heavily leaf littered areas. To control mosquitoes, we focus on the trees, shrubs and shaded areas of the property.

DETERMINING THE PRICE FOR YOUR PROPERTY

Using our online mapping software or by meeting with you at your property, we determine the price per application based on the treatable property size. This includes the lawn, the perimeter of the property, and about 20-30 feet into any wooded areas. Because our season length is variable, we do not price based on number of treatments, but instead on the overall product usage we will use throughout the season. Our clients are billed after each treatment.

Pure Solutions' routine tick and mosquito control program kills ticks and mosquitoes on contact in all life-stages without the use of harmful chemicals. Our exclusive product, PROGAEA™ Tick and Mosquito, is National Organic Program compliant and safe to be applied around children, pets, and delicate plant-life. Through a consistent, routine program, we build a residual barrier on the property and control the pests throughout the season.
