

## WATERING GUIDE FOR SEED GERMINATION

For the first round of applications, we will be mechanically seeding properties. In order to get the best results for seed germination, we have sent over watering guidelines for clients to follow. Overall, it is imperative that the seed stays damp until germination occurs, otherwise it will lower your lawns success.

### FOR PROPERTIES WITH IRRIGATION

We are recommending watering two-three times per day dependent upon your property and its ability to retain moisture. This should happen once in the morning, once in the early afternoon, and again before sundown. Natural rainfall events will eliminate the need to water, however this has to be monitored. This watering schedule should be followed until germination is seen which is roughly about 10-14 days. Once this happens, we can cut back the watering to once a day for about 15-25 minutes per zone. After another week or so of this schedule, we can cut back to watering 2-3 times a week as we have recommended throughout the season.

### FOR PROPERTIES WITHOUT IRRIGATION

We need to make sure that we are keeping the seed damp as well. While we understand that can be difficult without irrigation systems, it is certainly important if you are looking to get the full benefits of the seeding and the organic program as a whole. The lawn will need to be watered at a minimum of twice a day to make sure that it stays damp. Once in the morning and once in the early evening will give you the coverage that you need and you should still be able to see germination within the 10-14 day period. We recommend you continue watering twice a day for the following week and then we can back off to the regular recommendation of 2-3 times per week.

If you do not have irrigation systems and you do not want to hand water, feel free to give our offices a call and we can certainly make recommendations for different sprinkler attachments that you can buy at a local hardware store or garden center.

Our organic lawn care service and products will get your lawn off chemicals and make it a safe place for your family and the environment. We can also keep outdoor pests off your property with our organic tick and mosquito control lawn products.
